Steel Ice Dam

Poly Ice Dam

Poly Ramps

Steel Ice Dam

With features and benefits like these, it's no wonder our steel ice dam is fast becoming the ice dam of choice for multi-purpose arenas:

- Strong steel construction is resistant to ice build up or pressure
- Uniformity and strength means puck rebound is consistent
- Replaceable HDPE kickplate at ice edge
- Double set of integrated dasher anchors provide 100% backup should an anchor become stripped or unusable
- Insulated to minimize frost buildup or edge thawing
- Anchors that are prone to stripping can be easily repaired or replaced.
- Designed for installation on new rinks or retrofitted on existing

Available in steel and stainless steel in 2" or 2.5" thickness.

Poly Ice Dam

Popular for years in multi-purpose arenas, this natural white high density polyethylene has features not found in other ice dams:

- Cost effective
- Light weight and easy to install
- A good insulator
- Suitable for skate traffic

Commonly used in 7" widths to match dasher board panel widths and available in several thicknesses. In addition to the dasher anchors, the poly ice dam requires an additional 3 anchors per 8 feet. Available in 1" or 2" thickness.

Poly Ramps

Our durable and maintenance-free tapered poly ramps are custom machined from natural white HDPE. We offer ramps in 1", 1 1/2" and 2" heights that taper down to 1/4".

Available in straight or radius sections up to 10' in length

Standard straight sizes:

1" x 23" x 108"

1 1/2" x 23" x 108"

Standard radius sizes:

1" x 23" x 108"

1 1/2" x 23" x 108"
